React-Redux	Node.js/npm	SQL/MySql	WordPress

PROFESSIONAL EXPERIENCE

FRONT END WEB SOFTWARE DEVELOPER
FULL SAIL UNIVERSITY| WINTER PARK, FL | 12/1/16 — TODAY

Universal App, Full Sail's POC for a "universal" portal for current/prospective students
- Role: responsible for developing 3 pages for the App's Proof of Concept
- Learning Typescript, Angular 2, and NativeScript to build a "hybrid" sample app

OAA, Full Sail's Marketing Page for prospective students (app is in pre-production phase)
- Role: lead front end developer
- Wrote Gulp tasks
- Researched technologies to build a hybrid app
- Writing the style guide to be adopted by other front end developers
- Responsible for documenting the functionality, and scheduling and overseeing front end team meetings

DC3 Education, a Self-paced LMS (current)
- Role: front end developer
- Collaborates with a small team of developers to build DC3 Education
- Main responsibilities: write, debug, refactor, and maintain code, adding on-demand functionalities; translates specs and comps into code and communicates with managers and designer to ensure specifications are met

- Technologies: HTML, CSS, JavaScript (v.5, v.6), Angular, UI-Router, Angular-Auth0, Gulp, Bower, Node, Git, GitLab
- Works in an agile environment where developers and managers have weekly discussions about the state of the application and ongoing and future development sprints
- Communicates constantly with managers to exchange ideas about code implementation and suggests areas where code can be improved

LMS v.4, fourth version of Full Sail's Learning Module System (11/11/15 to 7/7/16)

- Role: front end developer
- Collaborated with a small team of developers to build the fourth version of Full Sail's LMS platform
- Main responsibilities: wrote, debugged, refactored, and maintained code; translated specs and comps into code and communicated with product team staff and designer to ensure specifications were met
- Technologies: HTML, CSS, JavaScript (v.5, v.6), React, React-Router, React-Redux, Immutable.js, Git, GitLab
- Worked in an agile environment where developers and product team staff meet weekly to discuss the state of the application and discuss ongoing and future development sprints
- Participated in developers weekly sprint meetings to share code progress and exchange ideas about code implementation

WEB DEVELOPER
SECURENET TECHNOLOGIES | LAKE MARY, FL | 06/08/15 — 10/02/2015
- Role: front end and back end developer
- Collaborated with a small team of four developers on the company's an all-in-one interactive security, video and home control solution web-based platform for the professional security space
- Main responsibilities: wrote, debugged, refactored, and maintained code
- Technologies: PHP, JavaScript, jQuery, HTML, CSS, Linux (Ubuntu), Git-Cli, BitBucket, FTP, and SSH
- Worked in an agile environment where specs were communicated verbally and developers were in close contact with manager and designer to ensure goals were met

ENGINEER/QUALITY ASSURANCE INTERN
PURPLE, ROCK, SCISSORS | ORLANDO, FL | 08/14 — 06/15
- Wrote HTML and CSS, wrote and compiled Sass, implemented Google Analytics Track Events, developed e-mails, installed and implemented WordPress plugins, migrated images via CyberDuck, and performed quality assurance on web sites and web applications.
- Worked mainly with HTML5, CSS3, Sass/Compass, Javascript/jQuery, Git-Cli, Grunt, Gulp, and WordPress
